COMMODITY u p d a t e

The COMMODITY UPDATE reports, issued monthly, contain information on prices, imports, exports and production by commodity. The information is taken from the network of GLOBEFISH correspondents and the GLOBEFISH European Price Report, INFOFISH Trade News, FAO FISHDAB, EUROSTAT and others.

The issues are scheduled approximately as follows:

| | |
|----------------------------------|--------------------------------|
| FISHMEAL-FISHOIL - <i>Spring</i> | CRAB - <i>Autumn</i> |
| BIVALVES - <i>Spring</i> | LOBSTER - <i>Autumn</i> |
| SALMON - <i>Spring</i> | CEPHALOPODS - <i>Winter</i> |
| SHRIMP - <i>Summer</i> | GROUNDFISH - <i>Winter</i> |
| TUNA - <i>Summer</i> | SMALL PELAGICS - <i>Winter</i> |

| | |
|--|---|

| Yearly shrimp production by major species (1 000 MT) | 75 |
| Wild shrimp production by major producing countries, in 1 000 MT | 76 |

Shrimp Commodity Update

Global shrimp markets during the first half of 2003 have seen a continuation of the weak price levels for farmed shrimp which characterized trade in 2002. This trend is broadly a result of a strong supply situation for farmed shrimp combined with weak demand conditions in key markets. The situation is more mixed for the wild shrimp trade. Catch levels of coldwater shrimp in South America have fallen back from the unusually high levels of 2001 / 2002 and prices have increased. Markets and prices for European coldwater shrimp on the other hand remain depressed.

The strong supply situation for farmed shrimp is reflected in increased imports again this year in the USA, the leading shrimp import market, as well as in France, the EU's second import market. Shrimp demand in both countries has benefited from weaker prices particularly in relation to farmed shrimp products. Weak prices have not had the same impact in Japan where volume imports are down this year. A negative import trend is also evident in Spain and Italy both of which have been affected by the reduced availability of Argentinean shrimp. Finally, indications from China point to reduced shrimp demand in the catering sector in 2003 due to SARS although retail sales appear to be buoyant as a result of falling price levels.

Shrimp traders will take some comfort from the lower profile of the residue issue in international trade. While an EU import ban continues to be applicable to Chinese farmed shrimp imports, the strict EU testing regime for Thai and Indonesian shrimp imports has been eased.

Production

Recently published FAO figures for world shrimp production indicate stable output levels in 2001 at 4.2 million MT. This follows a 1% increase in 2000 and a 9% increase in 1999. At 1.2 million MT, China remains by far the largest shrimp producer despite a 2.5% decline in volumes in 2001.

This drop in Chinese output was partially balanced by production increases in Mexico (+11%), Indonesia (+8%) and Vietnam (+4%). Shrimp production in Ecuador, which had fallen by over 50% in 2000 due to white spot disease, rebounded by 22% in 2001 to 63 000 MT. The recovery in the Ecuadorian industry appears to have continued through 2002.

At over 800 000 MT, black tiger shrimp remains the most important species in world production and output in 2001 was relatively stable compared to the previous year.

Global shrimp production is still dominated by wild / capture fisheries although the trend is in the direction of aquaculture. Capture production of shrimp reached a record 3.1 million MT in 2000. Volumes dropped below the 3 million mark in 2001 due largely to an 11% fall in Chinese catch levels. The two largest producers of wild shrimp, China and India, both saw output levels slip in 2001. Argentina, on the other hand, registered the largest increase in wild catches with levels in 2001 up over 100% to 78 000 MT. This increase, which had significant price and volume implications in key European markets, was short lived and Argentinean wild shrimp landings have fallen back to more usual levels in 2002 / 2003.

Aquaculture shrimp production continues a steady upward trend. Output in 2001 was up 11% to 1.3 million MT. This figure represents a 34% increase over the 1997 – 2001 period. China accounted for almost a quarter of farmed shrimp production in 2001 (19% in 2000) when the country overtook Thailand as the leading producer with a 40% volume increase to over 300 000 MT. Indications for 2002 point to another substantial increase, around 25%, in Chinese output.

Exports

Increasing shrimp aquaculture production is boosting the global trade in shrimp. In 2001, total shrimp exports increased by 7% to a record 1.6 million MT. However, 2001 was a difficult year for world shrimp markets. Prices were on a downward trend and this pattern continued through 2002 and into 2003. The negative price trend in shrimp markets is reflected in the value of shrimp exports in 2001 which fell by 5% from the record level of \$8.8 billion in 2000.

Thailand was once again the number one shrimp exporter with sales of 255 000 MT in 2001. However with the continued development of other shrimp industries, the Thai share of global exports has been declining for some years. In 2001 the Thai share fell below 16% for the first time since 1992. Argentina, in contrast, showed the biggest increase in exports in 2001 with volumes jumping from 27 000 MT in 2000 to 68 000 MT as a result of the increase in catch levels referred to above. The Argentinean share of world's exports increased to over 4% in 2001 from less than 2% the previous year. Other countries to increase their share of world exports in 2001 included Vietnam, Canada, Indonesia and Bangladesh. Vietnam, which is on a steady expansion course in shrimp aquaculture, increased the value of its exports by 19% to \$778 million.

Imports

Key import markets for shrimp include the USA, Japan, Spain, France, the UK and Italy. Contrasting trends are evident in these markets in recent years concerning volumes and market share while a common trend to almost all markets is the weakening of shrimp prices since 2001.

The USA is by far the largest shrimp market with import volumes in 2002 of just under 430 000 MT. US shrimp imports have increased steadily since 1996 and the 2002 figures represent a 7% increase on 2001. This trend has continued into 2003 with imports for the first half up 14% to almost 200 000 MT. The increase in US imports has been accompanied by a steady decline in import unit values. These decreased by an average of 12% in 2002 to \$8/kg.

A difficult economic climate in Japan, the second largest shrimp market, resulted in an import increase of just less than 2% to 250 000 MT in 2002. Figures for the first half of 2003 show a 10% decrease to 94 000 MT on the same period of the previous year.

In Europe, import trends were mixed in 2002. Spanish shrimp imports fell 4% to 128 000 MT due partly to a drop in frozen imports from Argentina. There was also a drop in Italian imports in 2002, -10% to 48 000 MT, due essentially to reduced imports from China following the EU ban on Chinese seafood imports. This negative trend has continued into 2003 with Spain down 12% and Italy down 13% for the January April period.

French shrimp imports, in contrast, are showing a positive trend. For 2002, French volume imports were up 5% to 77 000 MT thanks largely to increased supplies of competitively priced Brazilian shrimp. Brazil is now the largest supplier in volume terms to the French market while Madagascar retains the premier position in value terms. The positive trend in French imports has continued into 2003 with overall volumes up 8% for the first 4 months.

Prices

A steady decline in shrimp prices began in 2001 and continued through 2002. The decline was due to a variety of factors. Demand weakened in key markets, particularly the USA, following the events of September 11. Difficult economic conditions in Japan, as well as the weak yen, meant reduced demand and downward pressure on prices in that market. In the EU, the appreciation of the euro vis-a-vis the dollar effectively reduced import prices for shrimp products normally quoted in dollar terms. On the supply side, the EU ban on Chinese seafood resulted in increased offers of Chinese shrimp on the US market during 2002. Finally, increased aquaculture production in countries such as Vietnam and Brazil as well as strong catch levels for European coldwater shrimp contributed to the negative price trend for these products in key markets.

There are no indications of a serious pickup in prices in 2003. Demand conditions are not being helped by the poor economic outlook in several markets notably in the EU. Increases in selected wild shrimp prices are likely to be counterbalanced by weak prices for farmed shrimp as aquaculture shrimp production continues its steady development in numerous countries.
